

Appendix 1: Bird species that occur with at least some regularity in Nevada (> 10-15 individuals observed in a typical birding year). Status is ranked according to the following categories: Breeder = breeding populations best describe abundance and time of year of greatest conservation interest; Breeder/Migrant = both breeding populations and significant migrant populations from other regions occur in the state; Migration/Winter = only non-breeding populations occur in Nevada; Probable Migrant = species is presumed to occur as a migrant, but status unclear; Extirpated = species historically nested in Nevada, but was extirpated in recent decades; Reintroduced = species historically nested in Nevada and was reintroduced in recent decades. Species listed in taxonomic order.
